Skills

Mechanical Design & Manufacturing

- SOLIDWORKS
- GD&T
- CNC Machining
- CAM Fundamentals
- Manufacturing Processes
- Engineering Drawing Interpretation
- Lathe & Milling Machine Operations
- Welding Processes

Profile

Mechanical Manufacturing Engineer with a Bachelor's degree in Welding Engineering and a Master's degree in Mechanical Manufacturing, graduating first in my institute in graduation research with an Excellent distinction.

Passionate about mechanical design, manufacturing, and product development, I have hands-on experience in SOLIDWORKS, CNC machining, CAM, GD&T, manufacturing processes, lathe and milling operations, welding technologies, and Arduino-based robotics.

Throughout my internships, I contributed to engineering design improvements, manufacturing optimization, welding applications, and production problem-solving within industrial environments. I also designed and programmed a mobile-controlled robotic vehicle from scratch, which won first place in a university engineering competition.

Beyond technical expertise, I enjoy leading engineering teams and transforming innovative ideas into practical solutions. During my university studies, I was consistently selected by my classmates to lead research teams, strengthening my leadership, communication, and project management skills.

I am eager to contribute to innovative manufacturing projects while continuously expanding my expertise in mechanical design, advanced manufacturing technologies, and industrial engineering. I am motivated to learn quickly, adapt to new challenges, and create engineering solutions that improve product quality, manufacturing efficiency, and industrial performance.

Education

University Degree in Welding

(ISTA), Constantine **Oct 2021 - Jun 2024**

In-depth training in welding techniques and the use of industrial welding equipment, with a strong focus on safety and risk prevention. Proficient in various welding processes, including MIG, TIG, MAG, manual, semi-automatic, and automatic welding. Practical experience in machining, including the use of turning, milling, and drilling machines, applied through hands-on workshops and industrial projects.

Master's Degree in Mechanical Manufacturing Engineering

Frères Mentouri 1 University – Institute of Applied Sciences and Techniques (ISTA), Constantine **Sep 2024 - Jun 2026**

During my Master's studies, I further strengthened my expertise in SolidWorks, CNC, CAM, mechanical manufacturing, and engineering design. My coursework focused on product design, manufacturing processes, technical drawing interpretation and creation, simulation, and engineering analysis. I also developed strong skills in evaluating and interpreting engineering results to optimize manufacturing performance.

My Master's thesis received an **Excellent** grade (18/20), and I graduated first in my institute, demonstrating outstanding academic performance and dedication.

In addition, I co-authored a recognized academic research project entitled *"Optimization and Modeling of Performance in Bronze Turning,"* which focused on improving machining performance through engineering modeling and optimization techniques.

Employment

Welding Intern **Dec 2021 - Jun 2022**

Tonic Company, Bou Ismaïl, Tipaza, Algeria

- Learned about risk prevention methods and safety measures in welding and the industrial sector.

Engineering & Technical

- Product Design
- Mechanical Problem Solving
- Root Cause Analysis
- Process Improvement
- Prototype Development
- Robotics & Arduino Programming

Software

- SOLIDWORKS
- Microsoft Office
- Adobe Photoshop
- Adobe Illustrator
- Adobe Premiere

Professional Skills

- Leadership
- Project Management
- Teamwork
- Communication
- Analytical Thinking
- Continuous Learning

Languages

- ✓ Arabic ●●●●●
- ✓ English ●●●●○
- ✓ Frensh ●●●○○
- ✓ Italy ●●○○○

Hobbies

- Mechanical Design & Product Development
- Robotics and Automation
- Manufacturing & Engineering Innovation
- CAD Modeling (SOLIDWORKS)
- Programming & Electronics Projects
- Researching Emerging Manufacturing Technologies
- Graphic Design
- Strength Training & Fitness
- Swimming
- Learning

- Gained an understanding of the company's operating system and teamwork principles.
- Developed a collaborative mindset when working with workers and engineers.
- Familiarized with company safety standards and internal procedures.

Welding Intern **Nov 2022 - Jun 2023**

Tonic Company, Bou Ismaïl, Tipaza, Algeria

- Learned about risk prevention methods and safety measures in welding and the industrial sector.
- Gained an understanding of the company's operating system and teamwork principles.
- Developed a collaborative mindset when working with workers and engineers.

Second Training Period (Nov. 2022 – Jan. 2023):

- Conducted an in-depth study of industrial machine operations and monitored the entire production process from start to market release.
- Analyzed the company's strategy, including workload distribution and client management.
- Observed and learned about the company's organizational system.
- Active participation and positive evaluation for the quality of work provided.

Engineering and Mechanical Design Intern **Nov 2023 - Feb 2024**

SOFAR Company, Constantine, Algeria

- Analyzed production defects and identified recurring issues in product structures.
- Studied an excavator chassis model that exhibited excessive fragility, leading to frequent failures.
- Designed a new, more robust chassis using SolidWorks.
- Implemented an improved welding method to enhance the strength and durability of the chassis.
- Successfully resolved the issue, validated through internal testing, and received a 19/20 rating for the excellence of the work performed.

Achievements

- Ranked 1st in my institute during my Master's degree in Mechanical Manufacturing Engineering.
- Earned an Excellent grade (18/20) for my Master's thesis.
- Recommendation certificate from the best doctors at the institute.
- Conducted a recognized academic research project titled "Optimization and Modeling of Performance in Bronze Turning."
- Designed and built a smart robotic car from scratch, controlled through a mobile application, demonstrating skills in mechanical design, manufacturing, and system integration.
- Contributed to solving an engineering challenge during an internship at SOFAR, where I participated in developing a new structural frame design for a drilling machine to eliminate the failure of a critical structural component.
- Received a Certificate of Participation for presenting a startup project idea focused on converting ocean wave motion into electrical energy.
- Built an online educational community with 118,000 followers on TikTok and 16,000 followers on Instagram, where I create educational content.
- Certificate of Good Conduct.

Tipaza, October 17, 2026
